

SUMMARY

The CAD Services integration incorporates OnBase as the central repository for engineering files created in the leading CAD applications from AutoDesk®, Bentley®, and Dassault Systemes. The direct OnBase integration allows the end user to utilize OnBase to archive, retrieve, and modify drawings directly from the CAD application.

KEY BENEFITS

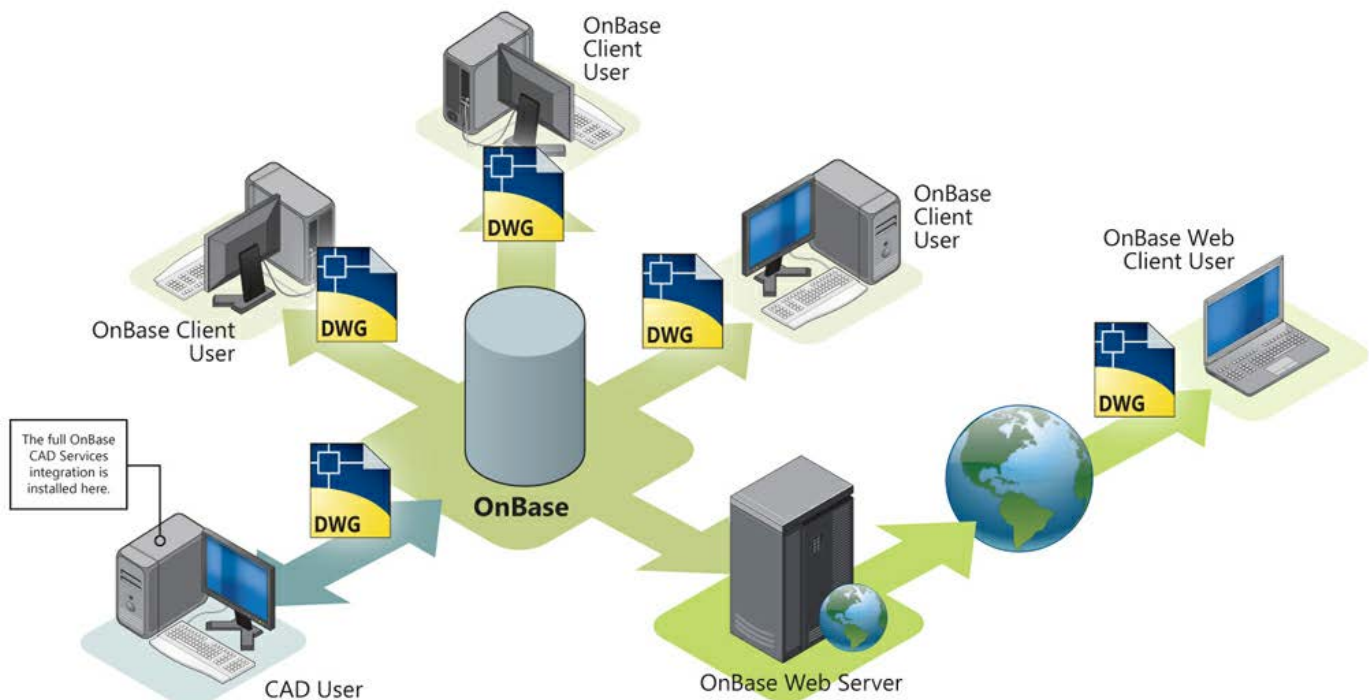

- **Enable centralized storage** for all documents within an organization
- **Minimize training** by keeping CAD user in the CAD application
- **Allow viewing** of CAD drawings to non AutoCAD users
- **Add and view drawing mark-ups** using one interface
- **Maintain document control** during the drafting period and review cycles
- **Remote access** to CAD drawings via the web

BUSINESS APPLICATION

Healthcare:

Hospital maintenance staff members use CAD Services to determine the location of building utilities such as oxygen lines and electrical panels. If there are issues that need troubleshooting, or new items need to be added, the staff member simply opens OnBase and retrieves the necessary data. Architectural drawings and other pertinent information, such as past maintenance records and specifications are presented to the user quickly and efficiently. Users can then zoom in, mark-up and annotate the drawings with the necessary information and save them directly in OnBase.

DESIGN

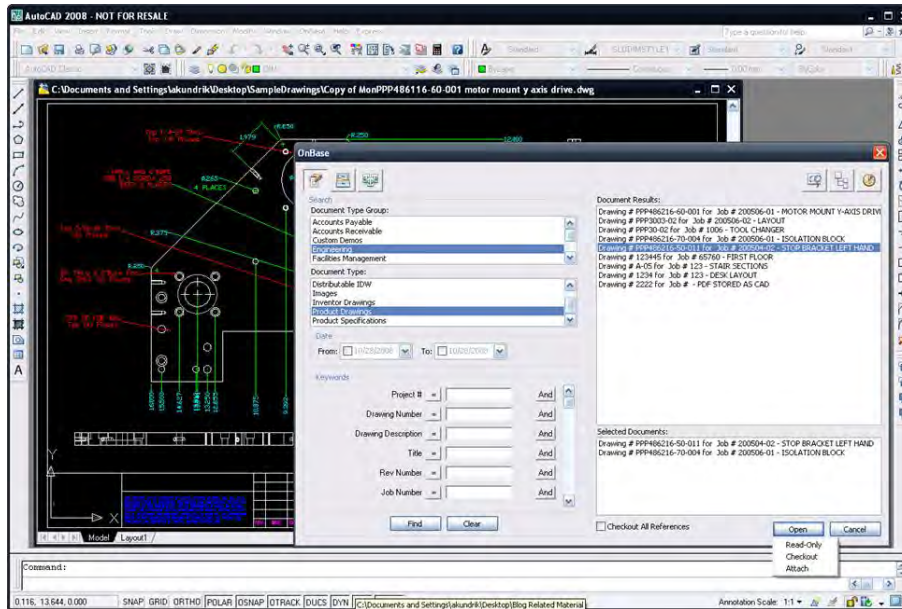

CAD users with the OnBase CAD Services integration running on their workstations are able to create new drawings and save them directly into OnBase, or retrieve existing drawings directly from OnBase. OnBase Client users can then use the integrated CAD viewer to view/markup the drawing. This viewer enables users without CAD software to view drawings and collaborate in review processes.

KEY FEATURES

- **Cross reference CAD documents** to other related OnBase documents.
- **Extract Metadata** from CAD drawings for automated indexing.
- **Automated folder structure creation** for the organization of project related data.
- **View document history** directly from the integration.
- **CAD documents can be viewed by all users in an enterprise** using the integrated CAD viewer.
